

TPMOV[®] Technology

Thermally protected MOV (TPMOV) technology

Mersen's patented TPMOV[®] technology eliminates common failure modes that occur in the field with standard metal oxide varistors. Internally the TPMOV is comprised of a voltage clamping device and a disconnecting apparatus that monitors the status of the metal oxide disk making the TPMOV a fail-safe device. In the event of an overvoltage breakdown the metal oxide disk is securely disconnected from the system power by an arc shield. Upon failure the TPMOV is also equipped with a visual pin indicator as well as a normally open micro-switch providing remote indication, if applicable.

The TPMOV is rated for 50kA - 8/20 μ s peak surge current and is available for maximum continuous operating voltages (MCOV) from 150V to 550VAC. No additional fusing or overcurrent protective device is required when using the TPMOV as compared to most MOV's on the market today.

The TPMOV footings are similar to that of equivalent voltage ratings of traditional 25 to 40mm MOV's. The TPMOV can be utilized on existing systems that utilize traditional MOV's without costly board redesigns. See dimensional drawings on the following page.

Features/Benefits:

- High energy capacity
- Consistent footprint with 25–40mm MOV's
- Built-in visual/remote indication
- Wave solderable
- No additional overcurrent protection device (fuses) required

Applications:

- Surge protective devices and systems
- AC / DC distribution systems
- High voltage power supplies
- Telecommunications equipment
- Motor control systems
- Computer related products
- PLC applications
- Power transfer switches

Ratings:

Volts : 150V - 550V AC

SCCR : 200kA

Nominal discharge current

: 20kA 8/20 μ s

Operating & storage temp

: -25°C to +60°C

Approvals:

- UL 1449 Third Edition Approved, File E210793
- Type 4 UL Recognized Component
- CE
- RoHS Compliant
