

MULTI-CONNECT® Recessed Wall Boxes

Features and Benefits

Hubbell Multi-Connect® Recessed Wall Boxes provide a versatile “in the wall” solution for single and multi-service applications. The product offering includes one, two, three, four and six gang boxes, barriers for separation of power and low voltage services, and a wide variety of modular face plates and wall flanges to match office decor. The recessed wall boxes are available in three styles: multi-service wall boxes for drywall applications, low-voltage wall boxes for drywall applications and multi-service wall boxes for masonry wall applications.

The drywall boxes feature a unique mounting stud bracket that allows the boxes to be used with 1/2”, 5/8”, 1” and 1 1/2” drywall. Concentric knockouts support the use of a variety of conduit sizes and cable fill needs. The modular face plates are available in a traditional screw type as well as a snap-in style for ease of installation with no exposed hardware. The installation is completed with snap-on wall flanges for a clean appearance. The Multi-Connect system provides superior aesthetics while reducing labor and allowing for future expansion capability.
